

*Everyday
Wheelchair*

New folding mechanism increases performance by reducing flex in the side frames.

Compact frame design which is ideal for loading in and out of your vehicle.

FOLDING

*You would never imagine
It was a folding wheelchair*

New folding mechanism increases performance by reducing flex in the side frames.

Compact frame design which is ideal for loading in and out of your vehicle.

The Genesis folding wheelchair has been carefully designed inside and out. Every component is the result of careful attention to detail. From the internal bearing housings to the ultra smooth folding cross-frame. The Genesis is a folding chair with a rigid attitude. Style was not an option during the design but was a must for Colours. You can say this is just the beginning of what's ahead.

TECHNICAL SPECIFICATIONS

Seamless L-shaped designed frame - simple and stylish.

We used a 1-3/16 inch large-diameter aluminum tube for the main frame-optimal for folding chairs, while maintaining the performance equivalent to a rigid frame, able to absorb the unpleasant vibration from the road and surface.

The newly designed aluminum caster fork housing has internal bearings just above the fork.

The caster housing not only became compact but lightweight, with the low center of gravity giving it more stability.

Rather than using the traditional square or round tubing on the folding mechanism. We adopted a new cross frame made from aluminum material which consists of a special sectional shape.

Not only does it give strength to the cross frame but added improved durability which achieved weight reduction.

Seat Width 32cm - 46cm

FSH 42cm - 49cm

Seat Depth

STD Frame 34cm - 40cm

Long Frame 40cm - 48cm

RSH 37cm - 43cm

Camber Angle 0°, 2°, 4°

Caster 3"- 5"

Weight 10.8kg (24 lbs)

Rear Wheel 22" - 25"
