- Provides functionality and mobility while being outdoors.
- Available with or without air ride system.
- Custom frame design options available.

TECHNICAL SPECIFICATIONS

One piece ultra-lightweight frame. 1" tubing. lightweight and strong aluminum frame. Very customizable. New front tear drop extrusion. Custom caster housing design for large ground clearance. There are no limitations to any customize requests.

8" casters with monster forks for extreme traction. Ideal for rolling over the most aggressive outdoor conditions and environment. Can also be set up for size 3,4,5,& 6 casters.

You can choose to either have 2" super durable axle tube or the super light weight air ride suspension unit for a smoother rider.

New 2nd Generation Suspension Frame: All structures were devised to improve strength and lightness. It is approximately 1 lb lighter than the previous model. It has a selected compact geometry design. The structure ensures rigidity and prevents interference with the body when mounted. The suspension unit can also be added to any everyday chair model for more of a smoother ride.

The extremely thick 2" wide axle tube is the Colours trademark for this chair. It reliably transmits the force of pushing the handrim to the ground. This axle tube firmly connects the left and right frames even when turning with light operation.
